

Sergio Fernández Contreras

About Me

I am a third-year student with a programmer profile and a passion for video games. My goal is to constantly learn and improve, which is why I put a lot of dedication and effort into what I do. An example of this is that, despite having only two years of experience in video game development, I have already participated in four Game Jams, winning two of them.

I have a strong ability to work in a team, fostering camaraderie and a good atmosphere through continuous communication and active listening. Additionally, I adapt very well to different situations with self-discipline and a strong commitment to achieving goals.
